

At ATS we understand the importance of simplicity and the value of your budget. Therefore, we can design a channel line-up specific to your individual choices. We can also set aside an in-house station allowing broadcasting of information and entertainment.

Our system allows individuals to receive specialty channels that may sometimes be available only through costly and complicated receiver boxes requiring further installation and education. No additional equipment is necessary with ATS. It is as easy as using the familiar remote to the TV owned by residents.

We also offer channel substitution if you wish to change one channel for another that is less favorable for viewing. ATS works with your facility to show that you care and listen to the needs of your occupants.
